Profile

A dedicated Cyber Security student at SLIIT University with a strong foundation in web development and valuable experience in the banking sector. As a freelancer, I have successfully delivered high-quality web development projects and managed client campaigns. I aim to leverage my unique blend of technical, analytical, and client-facing skills to build a successful career in technology.

Education

10/2023 – Present	BSc (Hons) in Information Technology Specializing in Cyber Security <i>SLIIT</i>
03/2022 – 09/2022	Diploma in English <i>Sabaragamuwa University of Sri Lanka</i>

Professional Experience

2022 – 2023	Banking Trainee Commercial Bank of Ceylon PLC Managed a wide range of frontline banking duties, from processing cash transactions and managing customer accounts at the counter to handling back-office operations. Demonstrated a high level of accuracy, trustworthiness, and customer focus.
01/2025 – 10/2025	Secure Web Developer Academy of knowledge bridge pvt ltd Focused on building and hardening WordPress security through proactive vulnerability management, patching, and implementing protective measures to ensure optimal performance.

Projects

Cybersecurity Risk Assessment – AKB Institute

- Integrated ISO/IEC 27005 and NIST SP 800-30 frameworks to systematically evaluate risks for a WordPress LMS platform.
- Audited critical assets including student databases, digital payment mechanisms, admin accounts, and cloud storage.
- Formulated a Risk Register mapping threats (e.g., website hacking, account takeover) against severe vulnerabilities (e.g., missing MFA, outdated plugins).
- Developed an actionable 4-week mitigation roadmap detailing preventive controls like WAF, SSL/TLS encryption, and endpoint security.
- Designed a targeted staff security awareness training program covering credential safety and phishing detection.

Android Reverse Engineering & Malware Simulation

- **APK Reverse Engineering:** Decompiled a target Google Calculator APK using **Apktool** to map package components and audit permissions.
- **Vulnerability Assessment:** Evaluated the source code to identify critical gaps like missing code obfuscation, absent runtime integrity checks, and no root detection.
- **Trojan Injection:** Injected a background Smali service triggered on device boot to collect basic hardware metadata.

- **Rebuild & Deployment:** Recompiled the modified code, signed it with **uber-apk-signer**, and deployed it to a physical device to verify security logs using **ADB** and **Logcat**.

Vulnerability Assessment & Penetration Testing

- Conducted structured reconnaissance, asset discovery, and automated network scanning using **Nmap** and **Sublist3r** within Linux environments.
- Utilized **OWASP ZAP** for proxy-based web application scanning to identify vulnerabilities and document remediation workflows.

Hands-on Security Labs & CTF Competitions

- **Privilege Escalation:** Completed advanced **TryHackMe** simulation labs focusing on exploitation vectors and misconfigurations across Linux and Windows.
- **Web Security Academy:** Finished specialized **PortSwigger** labs targeting modern web attack vectors like XSS, SQLi, and Authentication bypass.
- **Capture The Flag (CTF):** Maintained active participation in technical CTF events, solving offensive security challenges in cryptography and system pivoting.

Tools and Technical Skills

Operating Systems

- Windows
- Linux

Design Platforms

- Canva
- Figma

Languages

- C language
- C++
- Python
- Java script
- CSS

CMS

- Wordpress

Database Management

- Mysql

Certificates

- ISO/IEC 27001:2022 Information Security Associate™ ISO/IEC 27001:2022 Information Security Associate™ SkillFront
- Microsoft Student SOC Program Foundations by Microsoft
- Ethical Hacker from Cisco Networking Academy
- Certified Phishing Prevention Specialist Hack & Fix
- Practical Security Fundamentals TCM Security
- Introduction to Cybersecurity Fundamentals coursera
- ISC2 CC Candidate
- Certified Cybersecurity Educator Professional (CCEP) Redteam leaders
- Security Operations Center in Practice by IBM
- Junior Cybersecurity Analyst Career Path from Cisco Networking Academy
- Linux Fundamentals TCM Security
